

The Land of Algerb = Story

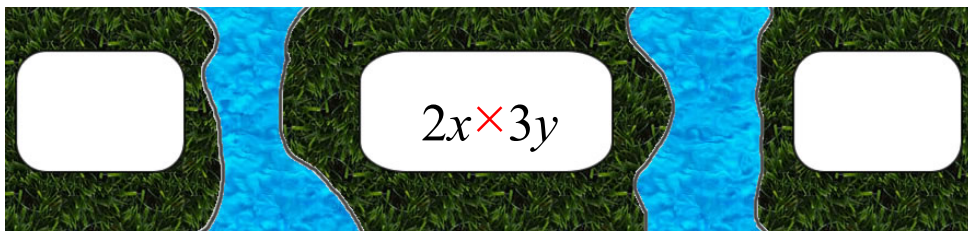

In the land of Algerb there were two kingdoms, the kingdom of $2x$ and the kingdom of $3y$. The King of $3y$ and the Queen of $2x$ both wanted to increase their lands.

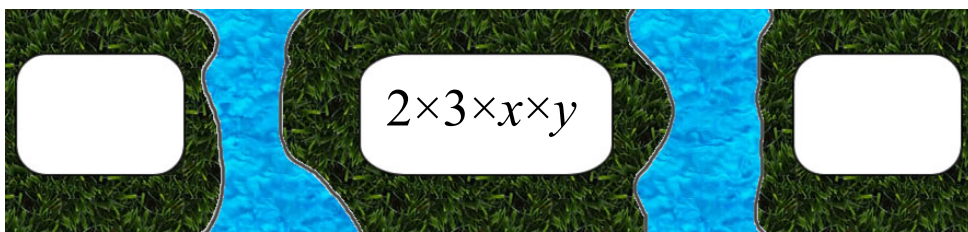

The King of $3y$ and the Queen of $2x$ took their explorers to the undiscovered land.

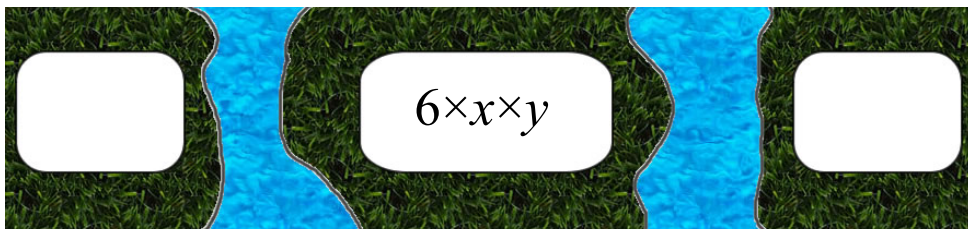

Whilst in this new land, the people mingled.

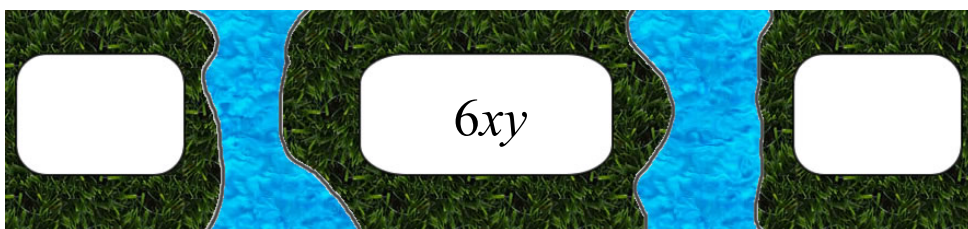

The numbers met the numbers and the letters met the letters.

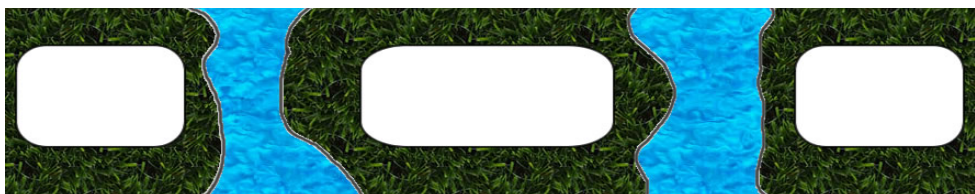

The two kingdoms became one, the numbers multiplied, but the letters stayed the same.

A new nation had been formed, each nation's numbers had been made bigger. But the letters of each nation were still distinctive. The x s from the $2x$ kingdom and the y s from the nation of $3y$.
